Pet Care in Colombia

Executive Summary

2026 developments

Colombia's pet care retail sales are expected to exhibit steady expansion, outperforming regional averages with a projected 9% increase in 2026 despite anticipated inflationary headwinds of 5%. This resilience will be underpinned by cautious but sustained consumer spending, driven by stable household incomes and a growing base of 19.5 million households. While volume growth is set to remain subdued, strategic promotional activity across product tiers is expected to successfully balance value and volume retention. Leading companies are leveraging innovation and broad portfolios to consolidate market share amid fragmentation, while emerging players are introducing personalised and functional offerings.

Key Data Insights

- Retail value sales increase by 9% in current terms in 2026 to COP8,299 billion
- Cat food is the best performing category in 2026, with retail value sales increasing by 17% in current terms to COP2,516 billion
- Ringo, Oh Mai Gat and Chunky are the leading brands in 2025
- Itacol de Occidente Ltda, Alimentos Polar de Colombia SA and Nestlé Purina PetCare de Colombia SA are the leading companies in 2025
- Retail value sales are set to increase at a current value CAGR of 9% over the forecast period to COP12,768 billion

Key Industry Trends

Chart 1 Key Industry Trends for Pet Care

Industry Performance

Cautious consumers and inflation drive promotion-led growth

In 2026, pet care in Colombia is expected to continue to experience steady growth, with retail sales value projected at COP8,299 billion, representing a 9% increase from the previous year. This growth is set to occur in a context of elevated but stabilising inflation, projected at 6% in 2026, which is expected to shift consumer behaviour towards value-seeking and promotional sensitivity. Despite inflationary pressures, pet care's volume growth is projected to be modest at 1%, indicating that consumers will remain cautious and focused on managing expenditures while maintaining pet care spending.

This cautious consumer sentiment is evident in the widespread use of promotional mechanics, such as multi-buy offers and significant price discounts across product tiers. Retailers and brands are set to intensify promotional activities, including bundles like “3x2” or “6x5”, especially in wet dog food and treats and mixers, to encourage stock-up buying among price-sensitive shoppers. Premium products are not exempt, with direct discounts of approximately 20–25% applied to maintain accessibility and stimulate volume. For example, the online pet retailer Mizoooco offers around 25% off on premium dog food brands like Vivance Vitality Adult, illustrating the category's reliance on promotions to counteract expected slower volume growth driven by economic caution.

Household dynamics also influence category performance, with the number of households in Colombia steadily increasing, projected to reach 19.5 million in 2026. Median disposable income per household is also expected to remain relatively stable at COP45,093,052, supporting sustained spending on pets despite economic challenges. This demographic and income environment, combined with inflation and consumer confidence index trends anticipated to be positive, is expected to create a backdrop where promotional strategies effectively balance volume retention and value delivery.

Dog food leads in volume while cat food outpaces growth

Dog food is expected to remain the largest contributor to pet care volume in Colombia in 2026, with 440,814 tonnes projected to be sold, although it is set to experience a slight volume decline of 2% compared to 2025. This volume contraction is expected to contrast with a projected 5% increase in retail sales value to COP4,298 billion, reflecting ongoing pricing pressures and premiumisation within dog food. The dog food category's volume softness will be influenced by consumer caution amid inflation, though value and premium tiers are expected to remain supported through promotional discounts and product innovation.

Conversely, cat food is set to demonstrate particularly dynamic growth, with retail volume set to rise by 9% to 142,502 tonnes and retail sales value surging by 17% to COP2,516 billion in 2026. This rapid expansion will be driven by demographic shifts, including structural changes in household composition where the cat population increasingly outnumbers dogs, alongside rising pet humanisation trends. The growing awareness of balanced pet nutrition and health is also expected to fuel demand for premium and specialised cat food products.

Other pet food is anticipated to maintain stable volumes of 2,024 tonnes with slight growth in retail sales of 6%, highlighting a niche but consistent demand. Pet products, set to be valued at COP1,392 billion in retail sales, will also contribute significantly, reflecting expanding assortments in pet shops and superstores and specialist outlets. The balance of these categories underscores the diversity within pet care, with dog food

PET CARE IN COLOMBIA

expected to lead in volume but cat food set to drive faster growth due to evolving consumer preferences and household trends.

Mizooco drives education and premiumisation amid inflation challenges

The most important trend expected to shape pet care in Colombia in 2026 is the dual influence of pet health and wellness alongside macroeconomic impact, which together is set to steer the category towards responsible ownership education and premium natural nutrition offerings. Institutional and market initiatives address concerns about animal overpopulation and abandonment by promoting sterilisation as a core aspect of responsible pet ownership. For instance, regional programmes in Valle de Aburrá performed over 20,000 sterilisation surgeries in 2025, combining these procedures with educational campaigns targeted at low-income households to raise awareness about population control and pet wellbeing.

Retailers like Mizooco exemplify this trend by integrating educational content on sterilisation and responsible pet care into their online retail platforms. Mizooco offers downloadable resources and awareness materials to inform pet owners about the health and societal benefits of sterilisation, while also guiding them towards professional veterinary services. This approach not only supports animal welfare but also reinforces consumer engagement and trust, aligning with growing consumer demand for holistic pet wellbeing.

Simultaneously, premiumisation advances through the expansion of natural and functional nutrition products, particularly in specialised retail channels such as pet shops and superstores. New brands like Nufood, featured in Puppis' assortments, promote premium grain-free formulations with fresh ingredients designed to support digestive health and balanced nutrition. Initiatives like the Instituto de Nutrición Natural para Mascotas further highlight institutional interest in educating owners about alternative, natural feeding approaches. This premiumisation trend caters to an increasingly informed consumer base seeking higher-quality, health-focused pet nutrition amidst economic and inflationary challenges.

What's Next?

Ageing pets to drive specialised nutrition innovation for healthier longevity

The ageing pet population is poised to become a critical driver of product innovation in the next five years, with owners increasingly aware of the unique nutritional and health needs of senior pets. This demographic shift will fuel demand for specialised pet food formulations that address joint health, cognitive function, and digestive sensitivity. Products such as Hill's Science Diet Senior Vital range exemplify this trend by targeting brain health and overall wellbeing in ageing dogs, reflecting a move towards tailored nutrition solutions.

This focus on older pets aligns with a broader emphasis on animal welfare and quality of life, encouraging the adoption of higher-quality, premium products designed for specific life stages. Manufacturers and retailers are expected to invest in developing and promoting these specialised offerings, which may also contribute to premiumisation in pet care. The growth of this niche will likely shape product portfolios and marketing strategies as the pet population matures and owners seek to extend their companions' healthy years.

Functional snacks with superfoods to gain traction amid evolving pet wellness demand

Demand for pet snacks with functional benefits is anticipated to intensify, driven by owners who seek health-supporting products beyond mere indulgence. Functional benefits, such as digestive support, relaxation, and dental care, particularly products enhancing breath and oral hygiene, are among the most sought after. This reflects a growing trend to integrate wellness into every aspect of pet care, mirroring human food trends.

Superfoods like turmeric, spirulina, and kelp are increasingly incorporated into snack formulations to enhance nutritional value and support pet wellbeing, while fruit and vegetables, such as blueberries, carrots, apples, and sweet potatoes, reinforce natural and health-oriented positioning. For instance, Spirudogs Functional Snacks for dogs incorporate spirulina to provide nutritional support, demonstrating innovation in this space.

Urban lifestyle shifts to increase cat ownership and demand for premium indoor pet products

Structural changes in pet ownership influenced by urbanisation and lifestyle trends are expected to reshape pet care dynamics, notably by slowing overall volume growth while accelerating premiumisation. Urban consumers favour apartment living and busier routines, leading to a rise in cat ownership as cats better suit compact living environments. This shift will drive demand for premium cat food, treats, and functional nutrition tailored for indoor pets, including products supporting feline health and wellbeing.

Complementary products, such as cat litter, interactive toys, and enrichment items designed for indoor cats, are also expected to see increased uptake, reflecting owners' focus on enhancing pet lifestyles. The growing share of cats relative to dogs will affect category mix and pack sizes, as cats typically consume less food, contributing to slower volume growth. This dynamic will reinforce the trend towards premium and specialised offerings, creating opportunities for innovation and diversification within pet care to meet the needs of urban pet owners.

Median disposable income per household is expected to increase steadily, with figures projected to reach COP56,252,516 in 2031. This income growth is set to underpin consumers' ability to invest in premium and

PET CARE IN COLOMBIA

functional products, further encouraging manufacturers to innovate in health-focused and lifestyle-enhancing pet care solutions.

Competitive Landscape

Leading players capitalise on innovation amid fragmentation

Pet care in Colombia remained moderately fragmented with a broad base of manufacturers holding relatively small shares, but the industry has become more concentrated towards the top players since 2021. Itacol de Occidente Ltda consolidated its position as the market leader, with its share increasing from 11% in 2021 to 16% in 2025. This rise reflects the company's strong manufacturing capabilities, a wide product range covering multiple price tiers and life-stage needs for both dogs and cats, and a strategic focus on innovation aligned with consumer trends such as natural nutrition and functional benefits. The presence of numerous smaller companies, many holding less than 1% market share, underscores ongoing fragmentation, but the growing dominance of Itacol de Occidente Ltda signals a trend towards greater concentration at the top.

The top two players, Itacol de Occidente Ltda and Alimentos Polar de Colombia SA, maintained their leads through differentiated offerings and strategic innovation. Itacol de Occidente Ltda's portfolio includes popular brands such as Chunky, Agility Gold and Italkan Plus, spanning economy to super-premium segments, while investing in novel product formats like dog yurt probiotic toppings and nutri-bar functional baked bars. These innovations cater to growing demand for natural ingredients and health-focused products, securing consumer loyalty and market share gains. Meanwhile, Alimentos Polar de

PET CARE IN COLOMBIA

Colombia SA showed some fluctuation, with shares peaking at 15% in 2023 but slightly declining to 13% by 2025, indicating competitive pressures but a sustained presence. Their ability to maintain significant share is likely due to established brand recognition and distribution reach.

Chart 9 Analyst Insight for Pet Care

The combination of strong manufacturing, broad and innovative product portfolios, and responsiveness to evolving consumer preferences explains why these leading companies have sustained and grown their market presence despite a competitive environment. Their investments in product innovation and diversification, especially in premium and functional pet nutrition, help differentiate their offerings and maintain consumer engagement, reinforcing their leadership positions going into 2026.

Source: Euromonitor International

Grupo Diana acquisition and startups drive premiumisation and category expansion

In 2025, Grupo Diana's acquisition of Alimentos Nutrión SA marked a significant development, enabling Grupo Diana to enter Colombia's pet care category with an established market share of 1%. This strategic move leverages Grupo Diana's established logistics, distribution and marketing capabilities to expand the reach of Alimentos Nutrión SA's value-positioned dry pet food brands across traditional and modern retail channels. The acquisition signals an ongoing trend of food industry players diversifying into pet care, increasing competition and potentially accelerating innovation and distribution efficiencies, which may reshape competitive dynamics and broaden product availability for consumers.

Emerging companies also contributed to category dynamism, notably True Blue, a Colombian startup focused on natural pet nutrition through steam-cooked dog food formulated without ultra-processed ingredients or artificial preservatives. True Blue's personalised nutrition model, combined with a direct-to-consumer subscription service tailored by breed, age and activity level, addresses growing demand for premium, natural and convenient pet food solutions. Supported by veterinary nutrition expertise and investment from Grupo Alpina, True Blue exemplifies how innovative business models and niche offerings are gaining traction, enhancing category premiumisation and fostering consumer engagement in specialised nutrition.

Product innovation further strengthens category appeal, as demonstrated by Gabrica SA's 2025 launch of Healthy Bites, a functional treats line for dogs and cats across Colombia, Peru and Chile. Incorporating high-quality proteins, vitamins, minerals and prebiotic fibres, the range addresses specific health benefits, including digestion, skin and coat care, dental health and weight management. This health-oriented positioning aligns with evolving consumer preferences for treats that offer nutritional value beyond indulgence, supporting brand differentiation and potentially driving sales growth. Collectively, these mergers, startups and product innovations create opportunities for businesses to capture emerging consumer segments, enhance portfolio diversification and capitalise on premium and functional nutrition trends in the near future.

Channels

Pet shops and superstores lead as discounters and warehouse clubs gain traction

In 2026, pet shops and superstores will maintain its position as the leading distribution channel in pet care in Colombia with a 41% value share, driven by retailers' strategic adoption of omnichannel approaches that blend physical store growth with robust digital platforms.

Warehouse clubs is expected to be the fastest growing channel in 2026, followed by discounters that are capitalising on increased foot traffic from price-conscious consumers responding to Colombia's economic environment. These consumers seek affordable pet care products without sacrificing essential items, which is expected to spur dynamic growth for discounters over the year. This shift reflects a broader consumer trend towards value-seeking behaviours amid inflationary pressures and cautious spending, especially within essential pet care categories. The growing prominence of discounters highlights the evolving retail landscape, where affordability and accessibility have become critical factors shaping distribution.

Retail offline channels overall are expected to dominate pet care, representing 74% of retail sales value in 2026, with grocery retailers accounting for a significant portion of this share. However, within grocery retailers, supermarkets and hypermarkets are set to show a declining trend, while discounters are steadily increasing their share, reflecting changing consumer preferences towards more cost-effective retail options. This evolving channel mix underscores the importance of both experiential retail formats and value-driven propositions in capturing consumer demand across Colombia's pet care landscape.

Retail e-commerce accelerates growth through convenience and niche visibility

Retail e-commerce plays an increasingly pivotal role in pet care distribution in Colombia, projected to reach 16% of retail sales value in 2026. This rapid growth is being fuelled by the expansion of specialised pet platforms, retailer-operated digital stores, and major marketplaces that enhance product accessibility and consumer convenience. Online shopping is expected to continue gaining popularity due to factors such as price comparison capabilities, home delivery services, and time-saving benefits, which have become particularly valued in recent years.

The competitive pressure retail e-commerce poses to offline stores is being moderated by omnichannel strategies that integrate online and physical retail, such as click-and-collect and subscription offerings. This approach allows retailers to leverage the strengths of both channels, maintaining consumer engagement across multiple touchpoints. Products that sell best online tend to be those that benefit from convenience and repeat purchase models, including premium pet food, treats, and healthcare products, where consumers appreciate home delivery and tailored offers.

Leading online retailers in pet care are attracting customers through integrated platforms combining extensive product assortments, educational content, and promotional activities. Laika, one of the country's largest pet retail platforms, exemplifies this trend by reporting a 20% sales growth in the first half of 2025, supported by its integrated online marketplace and expanding network of physical stores. The company plans to open 100 new physical outlets over the next three years, positioning these stores not merely as points of sale but as experiential spaces that offer advice and services to deepen customer engagement and loyalty. The growth of retail e-commerce is expected to continue, reshaping product distribution and brand visibility while providing smaller and niche players with new opportunities to reach consumers beyond traditional retail spaces.

Products

Value-driven promotions sustain sales amid cautious consumer spending

Economic conditions in Colombia in 2026 are expected to create a highly promotional retail environment for pet care products, as consumers adopt a cautious, recession-like mindset despite signs of stabilising inflation. Households will prioritise value and actively seek discounts, prompting brands and retailers to intensify promotional activity across both economy and premium product tiers.

Premium and functional dog food brands also rely on direct price discounts of around 20–25% to maintain accessibility and competitive positioning. For example, Mizoco's online store featured discounts of approximately 25% on premium dog food products like Vivance Vitality Adult in 2025, illustrating how even higher-tier products employ promotional pricing to stimulate sales.

Chart 13 Retailers Offer Promotion-Driven Sales Amid Cautious Consumer Sentiment

Source: www.mizoo.com.co

Specialist retailers expand natural nutrition to meet premium demand

Premiumisation in Colombia's pet care is advancing through the growth of natural and functional nutrition offerings, especially within specialised pet shops and superstores. Brands focusing on minimally processed formulations and natural ingredients are gaining traction, responding to consumer interest in holistic pet wellbeing. The introduction of products such as bone broth supplements by Pixie exemplifies nutrition positioned as both a treat and a health-supporting addition to pets' diets, reflecting an evolution beyond conventional pet food.

Retailers like Puppis have incorporated new premium brands such as Nufood, which offers grain-free dry dog food with high animal-protein content including fresh salmon, designed to support digestive health and balanced nutrition. This expansion of natural-positioned products in specialised retail demonstrates how retailers are diversifying assortments to satisfy growing demand for higher-quality, health-focused pet nutrition. Institutional initiatives like the Instituto de Nutrición Natural para Mascotas further support this trend by promoting education on alternative nutritional approaches, reinforcing commercial and consumer engagement with natural feeding practices.
